[LinkedIn](#) · [Portfolio](#) · [GitHub](#)

Frontend Developer with 2+ years of hands-on freelance and internship experience delivering production-ready web applications, dashboards, CMS, and landing pages. Specialized in React.js and Next.js with strong ownership in translating UI/UX designs into scalable, reusable component-based architectures. Proven ability to integrate REST APIs, build responsive interfaces, and ship maintainable solutions used by education institutions, government offices, and local businesses.

EXPERIENCE

Web Developer

May 2026 – Jul 2026

Student Research & Development Group · Freelance

Independent research initiative by a student group from SMA Islam Athirah Bone to build DMAI, a digital mental-health companion platform for high school students.

- Helped students reduce stress and stay focused during study routines by building a mobile-first mindfulness platform (Next.js, Supabase) featuring guided audio sessions, an interactive music player, mini-games, and feedback forms in a seamless multi-step flow.
- Enabled the research team to manage session content independently by building an admin CMS for creating and configuring multi-type sessions (narration, form, video, game steps), eliminating the need for manual database edits.

Supported real-time data collection for the research process by building a dashboard with Supabase Realtime presence tracking, surfacing which participants were online and which session they were accessing.

Web Developer

Jun 2025 – Aug 2025

SMA Islam Athirah Bone · Freelance

A branch of the Athirah Islamic education network, SMA Athirah Bone delivers a holistic education model that integrates academic rigor, Islamic values, and character development.

- Enabled non-technical administrators to manage news, announcements, and teacher data by delivering a custom Next.js CMS, eliminating developer dependency for routine content updates.
- Accelerated UI delivery by architecting a reusable component library that directly translated UI/UX design specifications into production-ready layouts.
- Improved content freshness and reliability across all site pages by integrating Supabase as a real-time backend, replacing static content with dynamic API-driven rendering.

Frontend Developer

Dec 2023 – Feb 2024

Cahaya Petshop · Freelance

A pet care and veterinary service provider offering grooming, boarding, and clinical services.

- Replaced manual record-keeping across grooming, boarding, and clinic services with an internal dashboard and customer tracking portal, providing real-time visibility into service history.
- Ensured reliable, real-time data flow across all service workflows by integrating REST APIs via jQuery AJAX in close collaboration with the backend developer, replacing fragile manual hand-offs between staff.

Frontend Developer

Sep 2022 – Mar 2023

PLN UP3 Makassar Selatan · Academic Internship

The regional unit of PLN (Indonesia's state-owned electricity company) responsible for power distribution across South Makassar, managing dozens of electrical substations across the city.

- Reduced operational inefficiency by moving manual Excel-based substation reporting into SiGadis (Distribution Substation Management System), a web dashboard that shows real-time substation status (operational, needs inspection, faulty).

- Simplified substation analysis by automating transformer load calculations to detect load imbalance, helping engineers find potential faults or leakage faster.
- Improved response time by displaying live substation data via APIs (jQuery AJAX) and integrating Google Maps for location-based monitoring.

Frontend Developer

Jun 2022 – Oct 2022

PUPR Sulawesi Selatan · Freelance

The South Sulawesi Provincial Office of Public Works and Spatial Planning, a government agency overseeing regional infrastructure and land-use planning for the province.

- Increased public accessibility of the South Sulawesi spatial planning system (SIMTARU) by delivering the primary public-facing landing page, ensuring the platform reached citizens across desktop and mobile devices.
- Maintained design fidelity and fast delivery by working directly with UI/UX designers to translate specifications into a fully responsive PHP-based frontend.

EDUCATION

Universitas Hasanuddin

Bachelor of Engineering – Informatics Engineering · GPA: 3.76 / 4.00

- Event Organizer, Google Developer Student Club (GDSC) UNHAS (2020–2022)
- Publication, Relation & Documentation Member, IEEE Student Branch UNHAS (2022–2023)

PROGRAMS & FELLOWSHIPS

Bangkit Academy — Cloud Computing Cohort

Feb 2022 – Jul 2022

Google, GoTo, Traveloka · Selective National Fellowship

- Deployed containerized Node.js and Flask APIs using Docker and Google Cloud Run to enable scalable application deployment.
- Integrated Google Cloud SQL and Firebase Storage to support an OCR-based KYC system as part of a Traveloka industry capstone project.
- Built a project landing page using HTML and CSS to present the solution and team deliverables during the final showcase.

SKILLS & LANGUAGES

Frontend: React.js, Next.js, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS

Tools: Git, GitHub, Vercel, Figma

API Integration: REST APIs

Backend & Data: Supabase, Firebase Firestore

Languages: Indonesian (Native), English (Working Proficiency)
